

## BatteryLogParser 사용법

1. Inputs 폴더에 파싱하고자 하는 adb bugreport 결과물을 넣는다.

1.1. 현재 프로젝트 내에 테스트 파일로 쓰고있던 input.txt, input2.txt, input3.txt 3개가 포함되어 있음.

2. configuration 설정이 필요 (IntelliJ기준)

[Edit Configurations...]에서 Program arguments에 inputs 폴더를 지정

(Working directory는 '프로젝트 폴더')

3. 프로젝트 실행

```

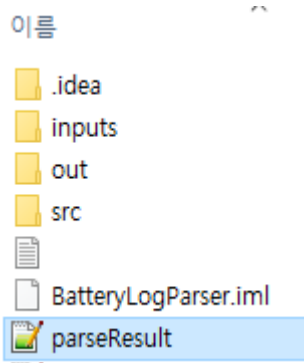

"C:\Program Files\Java\jdk1.8.0_131\bin\java" ...
Now parsing input.txt
Now parsing input2.txt
Now parsing input3.txt
The number of inputs: 3
===== File name: input.txt =====
* Android Version: 6.0
Log start from 11:35:00:944 to 17:07:11:00

```

4. 에디터 콘솔에 파싱 결과물 출력됨.

(CPU, Connectivity(3G, LTE, WIFI, Bluetooth), Screen(Bright, Light, Medium, Dim, Dark), GPS, Audio(trace+level count))

5. 실행 종료 후, 프로젝트 폴더 밑에 콘솔 로그와 동일한 내용이 "parseResult.txt"로 출력되어 저장.
